## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 16-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Chan et al. (6,468,906) in view of Kitch (6,140,238) further in view of Yakura (6,228,767).

Regarding Claims 16-19, Chan et al. disclose a passivation of copper interconnect surfaces with a passivating metal layer where an interconnect line on an IMD layer on a semiconductor device is formed in an interconnect hole in the IMD layer. The interconnect hole has walls and a bottom in the IMD layer. A diffusion barrier is formed on the walls and the bottom of the hole. Interconnect hole is filled with a copper metal line. A CMP step is performed to planarize the device and to remove copper above the IMD layer. A passivation layer is deposited on the surface of the copper metal line encapsulating the copper metal line at the top of the hole. Chan et al. fail to disclose the required diffusion barrier layer and the insulating film layer in the required manner. However, Kitch discloses a self-aligned copper interconnect structure and method of manufacturing same where the required diffusion barrier layer in the required manner is disclosed. Furthermore, Yakura discloses a non-linear circuit elements on integrated circuits where the required insulating film layer in the required manner is disclosed.

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required diffusion barrier layer and the insulating film layer in the required manner in Chan et al. as taught by Kitch and Yakura respectively in order to have a semiconductor device with better performance.
